The Surfacide Helios UV-C system has not been reviewed or approved by FDA and is marketed under FDA's "Enforcement Policy for Sterilizers, Disinfectant Devices, and Air Purifiers During the Coronavirus Disease 2019 (COVID 19) Public Health Emergency."

Intended Use: The Surfacide Helios UV-C system is a low-level disinfectant device which reduces, but does not completely eliminate, environmental microorganisms as an adjunct to currently existing cleaning practices and which is not a replacement for or modification to such practices.

Your facility deserves the best.

Why sacrifice efficacy for efficiency when you can have both?

The Surfacide Helios System is the only patented UV-C low-level disinfection solution to use multiple robots simultaneously, resulting in efficient and effective disinfection throughout your facility.

Surfacide Helios System

Enhance Your Cleaning Practices In:

- Hospitals
- Rehabilitation Facilities
- Ambulatory Surgery Centers
- Pharmacies
- Long-term Care Centers & Assisted Living Facilities
- Specialized Units
- Imaging Centers

A futuristic operating room with blue lighting. In the center, a Philips operating table is surrounded by several Surfacide Helios UV-C robots, which are tall, black, cylindrical units on wheels. The room features large surgical lights and a glass door with a red 'EXIT' sign. The overall atmosphere is clean and high-tech.

Three Sets Us Apart

The Surfacide Helios System is the only patented, UV-C hard surface low-level disinfection solution to use multiple robots in a single cycle. This approach results in greater efficacy in less time.

Surfacide Helios
Addresses Three
Key Areas:

01. Shadows

UV-C is a direct line-of-sight technology. Microorganisms can be present in shadowed areas and will not be killed if they are not directly exposed to UV-C energy. Surfacide provides line-of-sight UV-C energy to achieve low-level disinfection of nearby exposed surfaces.

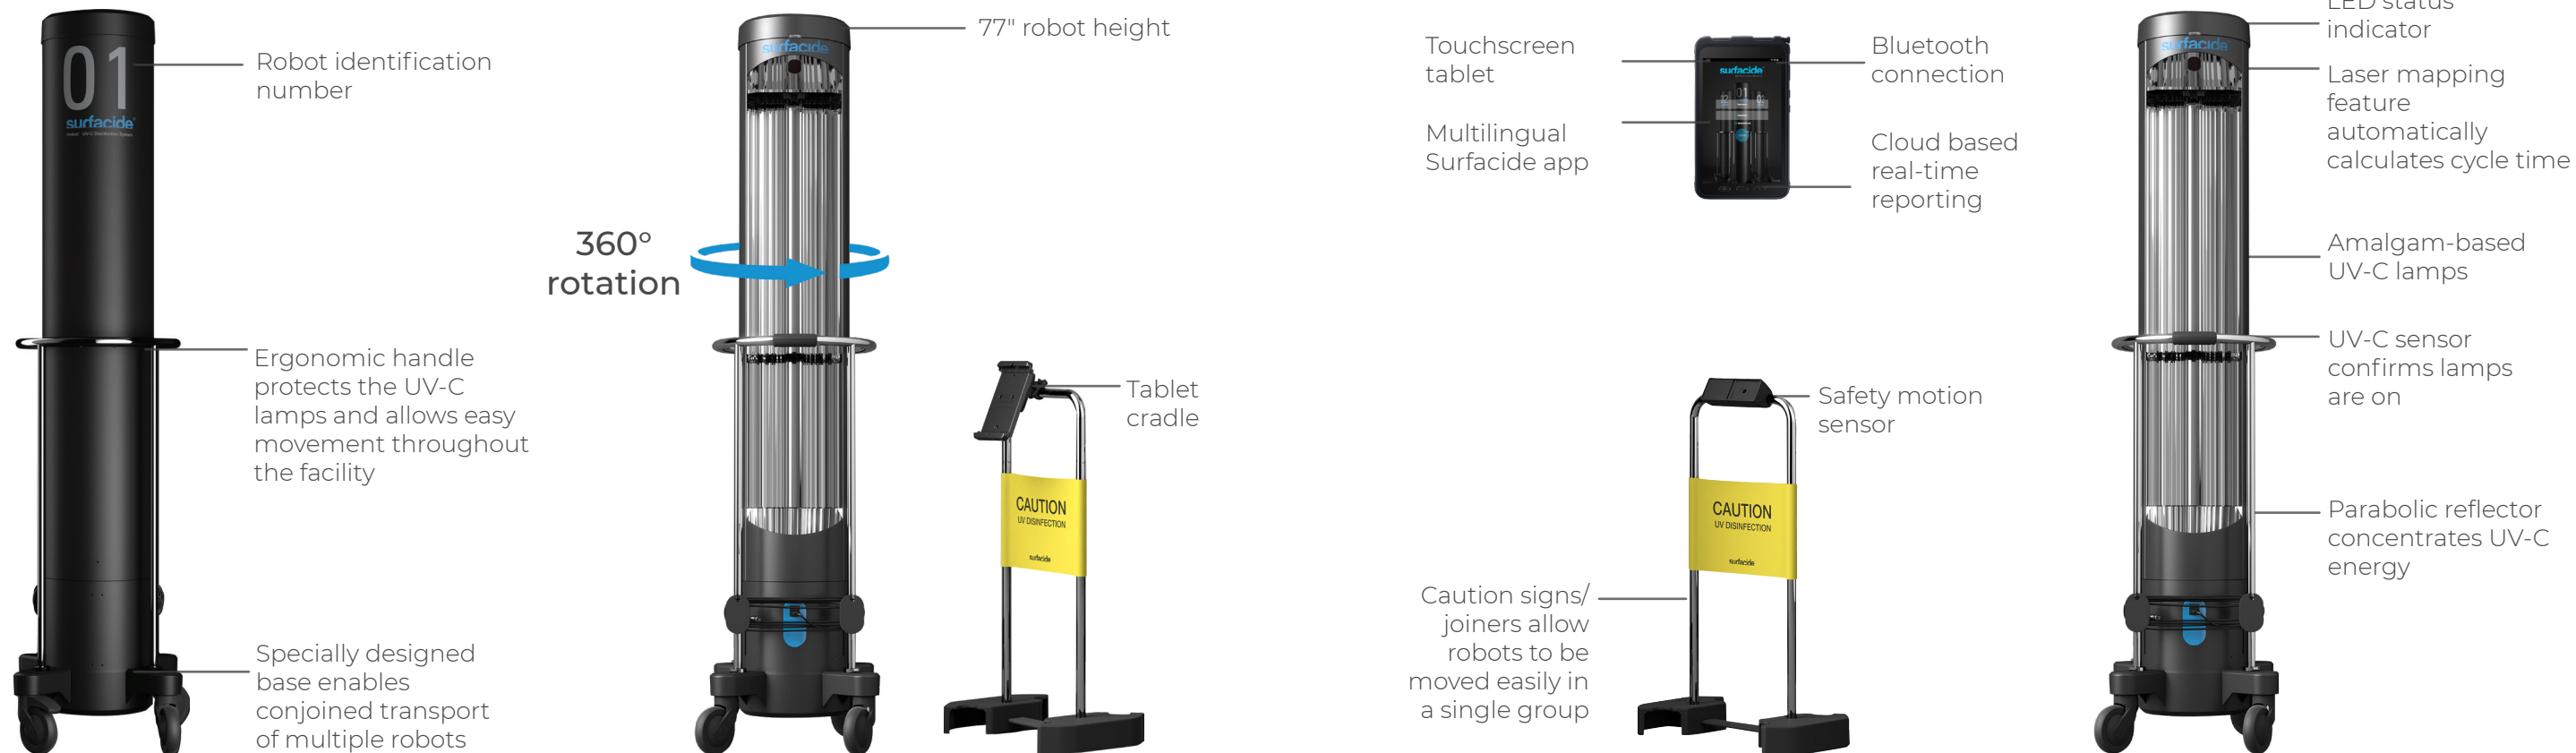

02. Distance

The closer the UV-C robot is to the target surface, the more energy it can deliver in less time. Through the use of multiple robots, Surfacide Helios is positioned closer to surfaces resulting in an efficient disinfection cycle.

03. Time & Labor

After manual cleaning, Surfacide's automated Helios System does not require any robot repositioning, which results in shorter cycle times and increased staff productivity.

Surfacide Helios System[®]

Disinfection in Minutes

Achieve Low-level
Disinfection in
Three Simple Steps:

01. After the standard terminal cleaning process, position the Surfacide Helios UV-C System into the space and position the three robots in a triangular configuration.

02. Place the safety motion sensors at all entryways and complete the safety checklist on the handheld tablet.

03. The UV-C robots will automatically calculate the cycle length to ensure an appropriate dose for low-level disinfection. From outside the disinfection area, initiate the disinfection cycle using the tablet.

Disinfection Made Simple.

Disinfecting a space doesn't have to be complicated or time consuming. After the manual cleaning process, the Surfacide Helios System makes it easy for your team to disinfect spaces throughout your facility quickly and effectively. Simplify your workflow and minimize turnover time with the Surfacide Helios System.

Leading The Way in UV-C

Surfacide Is Trusted In More Than 500 Facilities Globally

Surfacide products are designed, manufactured and tested within the scope of an ISO 13485 compliant Quality Management System. Surfacide products are independently verified to meet international safety standards and are ETL and CE marked.

Susan Collins
Director of Ancillary Services, Lost Rivers Medical Center

"It's so easy to use and transport throughout the hospital. As soon as we can properly train all of our maintenance personnel, we plan to use the tool more widely across the whole hospital."
